

Sample Question 1

Allotted time: 25 minutes (plus 5 minutes to submit)

t (hours)	0	0.3	1	2.8	4
$v_p(t)$ (meters per hour)	0	55	-29	55	48

The velocity of a particle, P , moving along the x -axis is given by the differentiable function $v_p(t)$, where $v_p(t)$ is measured in meters per hour and t is measured in hours. Selected values of $v_p(t)$ are shown in the table above. Particle P is at the origin at time $t = 0$. The acceleration of particle P , $a_p(t)$, at $t = 1$ is known to be $a_p(1) = -10$.

Also, the continuous function f is defined on the closed interval $-6 \leq t \leq 5$. The figure above shows a portion of the graph of f , consisting of two line segments and a quarter of a circle centered at the point $(5, 3)$. It is known that the point $(3, 3 - \sqrt{5})$ is on the graph of f .

(a) Find $\frac{d}{dt}[f(t) \cdot v_p(t)]|_{t=1}$

(b) Use a trapezoidal sum with the three subintervals $[0, 0.3]$, $[0.3, 1]$, and $[1, 2.8]$ to approximate the value

$$\text{of } \int_0^{2.8} v_p(t) dt.$$

(c) If $\int_{-6}^5 f(t) dt = 7$, find the value of $\int_{-6}^{-2} f(t) dt$. Show the work that leads to your answer.

(d) Evaluate $\int_3^5 (2f'(t) + 4) dt$.

(e) The function g is given by $g(t) = \int_{-2}^t f(x) dx$. Find the absolute maximum of g on the interval $-2 \leq x \leq 5$. Justify your answer.

(f) Using $g(t)$ from part (e), is the rate of change in g increasing or decreasing at $t = 3$? Explain your reasoning.

(g) Find $\lim_{t \rightarrow 1} \frac{e^t - 3f(t)}{v_p(t) - \cos(\pi t)}$.

Sample Question #2

Allotted time: 15 Minutes (plus 5 minutes to submit)

A cylindrical barrel with a diameter of 6 meters contains collected rainwater, as shown in the figure above. The water drains out through a valve (not shown) at the bottom of the barrel. The rate of change of the height h of the water in the barrel with respect to time t is modeled by $\frac{dh}{dt} = -\frac{1}{5}\sqrt{h}$, where h is measured in meters and t is measured in seconds. (The volume V of a cylinder with radius r and height h is $V = \pi r^2 h$.)

- Find the rate of change of the volume of water in the barrel with respect to time when the height of the water is 10 meters. Indicate units of measure.
- When the height of the water is 8 meters, is the rate of change of the height of the water with respect to time increasing or decreasing? Explain your reasoning.
- At time $t = 0$ seconds, the height of the water is 16 meters. Use separation of variables to find an expression for h in terms of t .
